

Contents

1	Preliminaries	2
1.1	Mathematical Prerequisites	2
1.2	Abstract Reduction Systems	3
1.3	Orderings	4
1.4	Multisets	7
1.5	Complexity Theory Prerequisites	9
2	Propositional Logic	10
2.1	Syntax	10
2.2	Semantics	13
2.3	Models, Validity, and Satisfiability	14
2.4	Normal Forms	18
2.5	Improving the CNF Transformation	21
2.6	The DPLL Procedure	25
2.7	From DPLL to CDCL	27
2.8	Implementing CDCL	31
2.9	Other Calculi	34
3	First-Order Logic	35
3.1	Syntax	35
3.2	Semantics	41
3.3	Models, Validity, and Satisfiability	43
3.4	Algorithmic Problems	45
3.5	Normal Forms and Skolemization	46
3.6	Getting Skolem Functions with Small Arity	49
3.7	Herbrand Interpretations	52
3.8	Inference Systems and Proofs	53
3.9	Ground (or propositional) Resolution	55
3.10	Refutational Completeness of Resolution	56
3.11	General Resolution	62
3.12	Ordered Resolution with Selection	71
3.13	Redundancy	77
3.14	Hyperresolution	81
3.15	Implementing Resolution: The Main Loop	82
3.16	Summary: Resolution Theorem Proving	83
3.17	Semantic Tableaux	83
3.18	Semantic Tableaux for First-Order Logic	90
3.19	Other Inference Systems	93
4	First-Order Logic with Equality	95
4.1	Handling Equality Naively	95
4.2	Rewrite Systems	96

4.3	Confluence	100
4.4	Critical Pairs	102
4.5	Termination	104
4.6	Knuth-Bendix Completion	112
4.7	Unfailing Completion	117
5	Termination Revisited	120
5.1	Dependency Pairs	120
5.2	Subterm Criterion	122
5.3	Reduction Pairs and Argument Filterings	124
6	Implementing Saturation Procedures	128
6.1	Term Representations	129
6.2	Index Data Structures	130
7	Outlook	136
7.1	Satisfiability Modulo Theories (SMT)	136
7.2	Sorted Logics	137
7.3	Splitting	138
7.4	Integrating Theories into Resolution	138
