

Contents

1	Preliminaries	2
1.1	Mathematical Prerequisites	2
1.2	Abstract Reduction Systems	3
1.3	Orderings	4
1.4	Multisets	8
1.5	Complexity Theory Prerequisites	10
2	Propositional Logic	12
2.1	Syntax	12
2.2	Semantics	15
2.3	Models, Validity, and Satisfiability	16
2.4	Normal Forms	20
2.5	Improving the CNF Transformation	23
2.6	The DPLL Procedure	27
2.7	From DPLL to CDCL	29
2.8	Implementing CDCL	33
2.9	OBDDs	36
2.10	FRAIGs	41
2.11	Other Calculi	41
3	First-Order Logic	42
3.1	Syntax	42
3.2	Semantics	48
3.3	Models, Validity, and Satisfiability	50
3.4	Algorithmic Problems	52
3.5	Normal Forms and Skolemization	53
3.6	Getting Skolem Functions with Small Arity	56
3.7	Herbrand Interpretations	59
3.8	Inference Systems and Proofs	60
3.9	Ground (or propositional) Resolution	62
3.10	Refutational Completeness of Resolution	64
3.11	General Resolution	70
3.12	Theoretical Consequences	78
3.13	Ordered Resolution with Selection	79
3.14	Redundancy	85
3.15	Hyperresolution	89
3.16	Implementing Resolution: The Main Loop	90
3.17	Summary: Resolution Theorem Proving	91
3.18	Semantic Tableaux	91
3.19	Semantic Tableaux for First-Order Logic	98
3.20	Other Deductive Systems	101

4	First-Order Logic with Equality	103
4.1	Handling Equality Naively	103
4.2	Rewrite Systems	104
4.3	Confluence	108
4.4	Critical Pairs	110
4.5	Termination	112
4.6	Knuth-Bendix Completion	120
4.7	Unfailing Completion	125
5	Termination Revisited	128
5.1	Dependency Pairs	128
5.2	Subterm Criterion	130
5.3	Reduction Pairs and Argument Filterings	132
6	Implementing Saturation Procedures	136
6.1	Term Representations	137
6.2	Index Data Structures	137
7	Outlook	143
7.1	Satisfiability Modulo Theories (SMT)	143
7.2	Sorted Logics	144
7.3	Splitting	144
7.4	Integrating Theories into Resolution	145
